

How to install ANACONDA

1. Go to <https://www.anaconda.com/download/>
2. Select your platform

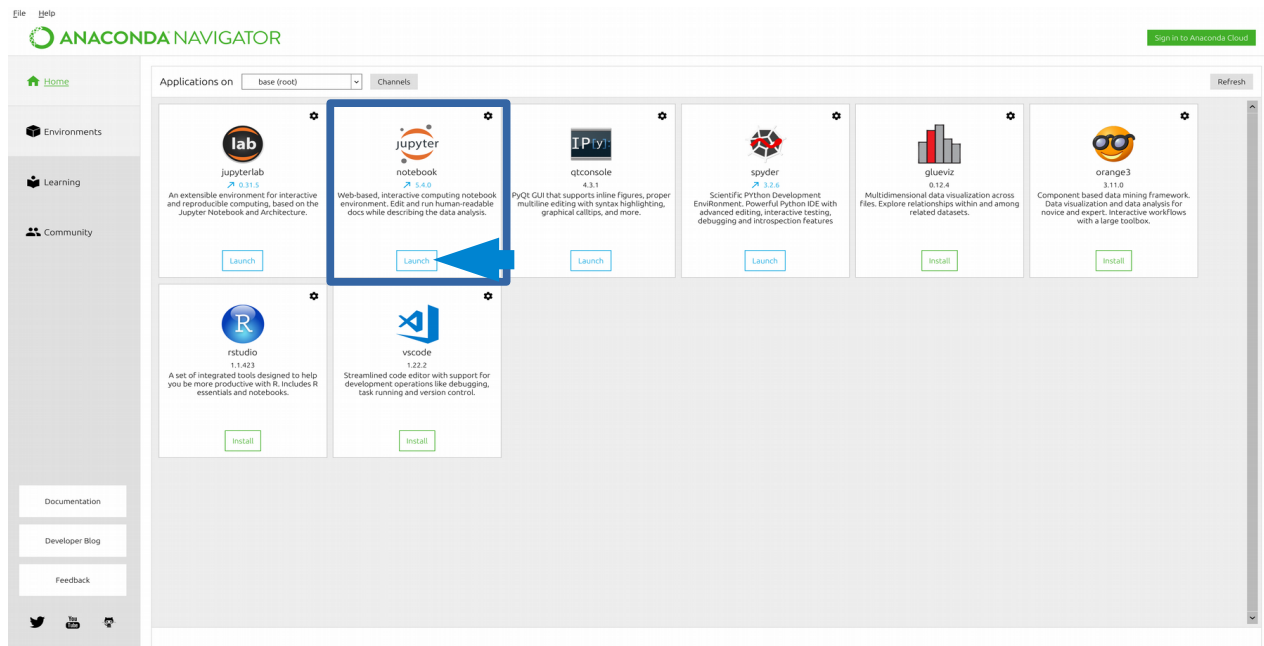

3. Download Python 3.6 version (for a detailed instruction check the link at the bottom of the page)

4. Perform installation

5. Start ANACONDA NAVIGATOR (search in your „Applications“)

6. Launch a Jupyter Notebook Session to test if everything is working

7. Go to your web browser (Firefox, etc.). You could see something like:

8. Open a new Jupyter Notebook. You can enter some code into the first cell and execute it by pressing **Shift+Enter**.
